

UX Case Study – Zomato

Page 1 – Introduction

Zomato is a food delivery and restaurant discovery application. Users can search restaurants, explore menus and place orders.

Objective:

To analyze the user experience and identify improvement opportunities.

Page 2 – User Journey

User Flow:

Open App

→ Search Food

→ Select Restaurant

→ Add Items

→ Checkout

→ Payment

→ Order Tracking

Observation:

The journey is simple but sometimes users face decision overload because of too many options.

Page 3 – Strengths

1. Easy Navigation

Users can quickly move between categories.

2. Fast Search

Search provides quick restaurant discovery.

3. Attractive Interface

Clean visuals and organized layout.

Page 4 – Weaknesses

1. Too Many Promotions

Home screen can feel crowded.

2. Long Checkout Flow

Multiple steps increase friction.

3. Filter Complexity

Users may struggle to find exact options.

Page 5 – Suggested Improvements

Improvement 1

Add cleaner homepage layout.

+-----+ | Search Food | +-----+

[Pizza] [Burger]

Restaurant List

Improvement 2

Reduce checkout steps.

Sample Mockup:

Cart

↓

Payment

↓

Order Confirmed

Improvement 3

Introduce smarter recommendation filters.

Sample Mockup:

[Veg]

[Rating]

[Price]

[Distance]

Conclusion

Zomato offers a strong food ordering experience with intuitive navigation and strong discovery features. Improving checkout and reducing visual clutter can further enhance usability.
